

## Technical Documentation for Your E-Commerce Store

### 1... System Architecture Overview

- Frontend (Next.js):
  - A user-friendly and responsive interface designed for both desktop and mobile users.
  - Essential pages: Home, Product Listing, Product Details, Cart, and Order Confirmation.
- Sanity CMS (Backend):
  - Used for managing product data, customer details, and records.
  - Acts as the primary database for your e-commerce store.
- Third-Party APIs:
  - APIs for shipment tracking, payment gateways, and other backend services.
  - Ensure seamless data exchange and real-time updates.
- Data Flow:
  - Frontend interacts with Sanity CMS through Product Data APIs.
  - Third-party APIs handle shipments and payment gateways.
